User Registration Process

The registration process for the app involves the following steps:

1. The user attempts to register
2. The user information is sent to the server
3. The server communicates with the database to add the new user to the Users table
4. If the registration is successful, the app displays a message to the user

If the registration fails, the process ends at step 1.

User	App	Server	Database

Open the program

Click on "Register" and enter required information

Send registration request

Add new user to Users table

Registration successful

Registration successful

Alternative

[Registration fails]
